

**ABSTRACT OF THE DISCLOSURE**

A miter saw table support device includes a table having a panel and  
5 a plurality of legs that are attached to and extend downwardly from the  
panel. Each of a pair of supports is attached to the top surface of the  
panel and are positioned adjacent to a front edge of the panel. The  
supports are spaced from each other such that a base of a miter saw may be  
selectively positionable between the supports. Each of a pair of guides is  
10 attached to one of the supports and extends outwardly away a respective  
one of the first and second side edges. The guides each have a break  
therein such that a first section and a second section of each of the guides  
are defined. Each of the first sections is hingedly coupled to a  
corresponding one of the second sections.
